Enabling Evolution

BLODECOFILL

Four technologies combined in one single
solution

BLODECOFILL makes production smoother and smarter, combining key processes in one reliable solution that delivers consistent quality with minimal effort.

BLODECOFILL

Blowing, Labelling, Filling and Capping Machine

FOUR TECHNOLOGIES COMBINED IN ONE SINGLE SOLUTION.

A single platform that brings together **blowing, labelling, filling** and **capping** with production speeds of up to **100,000 bottles per hour**. **Optimized footprint** and the possibility of exploiting all the advantages of the individual stand-alone solutions characterize the proposal, validated by primary ACMI customers around the world with **99% production efficiency**.

PROCESS-BENEFITS

In particular, the blower supports **double cavity technology**, exclusive by ACMI, with the possibility of doubling productivity on small-medium formats.

The solution can be equipped with the innovative **cap feeder**, easily accessible and equipped with patented technology for optimal caps flow management.

Labeling takes place on the **empty container**, before filling, simplifying the process.

QUALITY CONTROL, ENERGY SAVING

BloD3coFill is available with **ACMI vision systems** for the inspection of preforms, caps and labels.

100,000 bph

Output rate

The best **energy performance** is guaranteed, among others, by the **compressed air recovery system** from the blow moulder that feeds the filler and labeller.

TECHNICAL FEATURES

Up to

- 18 cavity blower
- 40 head labeller
- 120 filling valves

BloDecoFill, unlimited flexibility at the highest speeds on the market, with reduced footprint and all the advantages of ACMI technology.
